

Step 1: Create a header and a main div. Please try to implement the background-color as below.

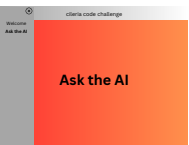

Step 2: Add the Side Drawer. Please use <https://reactjs.com/docs/modal-dialog.html>. When the user clicks on the hamburger icon, the side drawer should open.

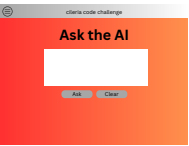

Step 3: When the side drawer is open, the user should see two menu-points "Welcome" and "Ask the AI".

Step 4: When a menu-item is active, it should be bold.

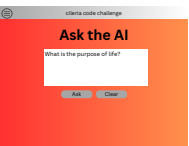

Step 5: When the user has clicked on "Ask the AI", he should see this instead of "Hello World!": A heading, a textarea and two buttons.

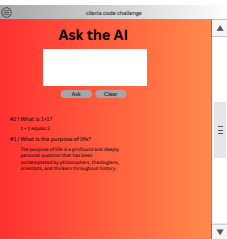

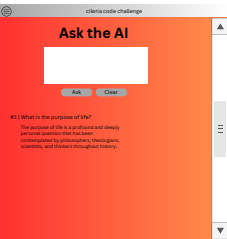

Step 6: When the user clicks on "Ask", a POST request to <http://localhost:3002/api/ask> with the body { "prompt": "What is the purpose of life?" } should be sent. Instead of prompt, the content of the textarea should be sent.

The result should be { result: { id: "7c3b3d30", result: "The purpose of life is a deeply philosophical and personal question" } }. When the user clicks on "Clear" the textarea should be emptied.

Step 7: Whenever a POST request has been sent, send a GET request to <http://localhost:3002/api/prompts> and read the result. It should be an array of prompts. The resulting format should be like [{"prompt": "What is the purpose of life?", "id": "7c3b3d30"}]. The purpose of this is a deeply philosophical and personal question that needs thoughtful and creative answers for humans. Since before the purpose of life is hard to answer and therefore, we often tend to think we want our computers to be able to give an answer. This, is not the first purpose in spiritual or religious beliefs. Ultimately, the purpose of life can vary greatly from person to person.":}]

Step 8: Add a remove button to remove elements of the history. Also send a DELETE request, like e.g. <http://localhost:3002/api/prompts/7c3b3d30>
